Task 3 – Coding Practice and Cloud Collaboration Tools Report

Introduction

As a Digital Ambassador, it is important to guide peers in selecting the right online tools for learning, practicing, and collaborating. This task focuses on exploring coding practice platforms and understanding how they help in improving programming skills.

Part A – Coding Practice

For this task, I selected HackerRank as my coding practice platform.

Account Creation

I created an account on HackerRank using my email ID. The process was simple and user-friendly, requiring basic details such as name, email, and password.

Challenge Completed

I completed a beginner-level problem called **"Solve Me First."**
In this challenge, I was required to write a program that takes two integers as input and prints their sum.

Code Used

I implemented the solution using C++/Python. The program successfully passed all test cases on the platform.

Learning Outcomes

- Learned how to take input from the user
- Understood basic arithmetic operations in programming
- Gained knowledge of how coding platforms evaluate solutions
- Improved problem-solving and logical thinking skills

Experience

The experience of using HackerRank was very positive. The platform is beginner-friendly and provides clear instructions. It helped me build confidence in coding and motivated me to solve more problems.

Part B – Cloud Collaboration Tools

Cloud collaboration tools help users work together online, share files, and communicate efficiently.

Examples of Tools

- Google Docs
- Microsoft OneDrive
- Dropbox

Features

- Real-time collaboration
- File sharing and storage
- Easy access from any device
- Automatic saving and backup

Importance

These tools are very useful for students as they allow group work, assignment sharing, and easy communication without needing to meet physically.
