Description:

For this project, I used Google Forms as my main platform to create a Digital Literacy Awareness Quiz. I designed the form by adding multiple-choice questions related to online safety, responsible internet use, and basic digital knowledge. This helped me learn how to structure questions clearly, customize the form layout, and collect responses efficiently. I also explored features like automatic data collection and summary charts, which made it easier to analyze the results.

Through this activity, I practised important skills such as form creation, data handling, and understanding user responses. Using Google Forms will help me academically by allowing me to create surveys, gather feedback for projects, and organize information in a simple and effective way. It also improves my ability to use digital tools confidently, which is essential for modern education and future learning.
