CSE0001 – Digital Literacy

Project Assignment Brief

Name - Nazim Khandakar

Reg No-25BCY10161

Branch - Cybersecurity and Digital Forensics

Year-2026

Course Code- CSE0001

Course- Title Digital Literacy

Date-31/01/2026

Project Report: Digital Literacy and Cyber Awareness

Introduction :

This project focuses on developing essential digital literacy skills required for students in today's technology-driven world. It includes creating an infographic, building a digital portfolio, exploring coding platforms, understanding email etiquette, and learning about cybercrime awareness. These tasks help in improving both technical and communication skills. Digital literacy is not only about using technology but also about using it safely, responsibly, and professionally. Through this project, I gained practical experience with different digital tools and platforms that are useful for academic and career growth. It also helped me understand the importance of maintaining a professional online presence and protecting personal information from cyber threats. Overall, this project provided a well-rounded learning experience.

Task 1 Write-up

For this task, I created a digital literacy awareness infographic using **Canva**. The infographic covered topics such as digital literacy, safe internet practices, and email etiquette. I used simple text, icons, and a clean layout to make the content visually appealing and easy to understand. The design explained how students can use digital tools effectively, stay safe online, and communicate professionally through emails.

While creating the infographic, I found Canva very user-friendly due to its templates and drag-and-drop features. It allowed me to experiment with different styles and layouts. One interesting aspect was how visual elements can make information more engaging compared to plain text. However, I found it slightly challenging to organize all the content without making the design look crowded. This task improved my creativity and design skills, and it also helped me understand how to present information clearly in a visual format.

Task 2 Write-up

In this task, I created and updated profiles on **GitHub**, **LinkedIn**, and **Stack Overflow**. These platforms are important for building a strong digital portfolio. GitHub is used to store and share coding projects, where I created a profile README with my academic details and goals. LinkedIn helps in professional networking, and I updated my education section to make my profile complete. Stack Overflow is a platform where developers ask and answer questions, which helps in learning and problem-solving.

Over the next four years, I plan to regularly upload projects on GitHub to showcase my skills. I will use LinkedIn to connect with professionals, explore internship opportunities, and stay updated with industry trends. On Stack Overflow, I aim to learn from discussions and gradually contribute by answering questions. These platforms will help me grow academically and professionally.

ask 3 Write-up

In this task, I worked as a Digital Ambassador and explored both coding practice platforms and cloud collaboration tools. For coding practice, I created an account on **HackerRank** and completed a beginner-level challenge. This helped me understand basic problem-solving techniques and improved my confidence in coding. The platform provides structured exercises that are useful for beginners to practice and build logical thinking skills.

For collaboration, I used **Google Forms** to create a Digital Literacy Awareness Quiz consisting of five questions. The quiz included both multiple-choice and short-answer questions to test basic knowledge of digital safety and online practices. I also reviewed the responses using Google Sheets, which helped me understand how data can be collected and analyzed efficiently.

This task was very useful as it combined technical learning with practical application. I learned how to guide others toward useful tools for studying and collaboration. In the future, I plan to continue practicing coding regularly and use cloud tools for teamwork and academic projects.

Task 4 Write-up

This task focused on professional communication through emails and responsible social media use. I learned how to write formal emails with a clear subject line, proper greeting, structured body, and polite closing. Understanding email etiquette is important for communicating with professors and professionals.

I also learned about responsible social media behavior, including what to post and what to avoid. Poor digital communication can lead to misunderstandings and negative impressions. For example, sending unclear or rude messages can affect relationships and opportunities.

This task helped me understand the importance of clear, respectful, and professional communication in both academic and professional environments.

Task 5 Write-up

While researching cybercrime and online safety, what surprised me the most was how easily people can become victims of phishing and UPI fraud. Attackers often use simple methods like fake links and urgent messages to trick users. It was shocking to learn that even students and educated individuals fall for these scams.

As a result, one habit I will change is being more cautious while handling online messages and transactions. I will always verify the source before clicking links or approving payments. I will also enable two-factor authentication to improve my account security. This awareness will help me stay safe and protect my personal information online.

Conclusion (100 words)

This project helped me develop important digital skills, including designing, communication, coding, and online safety awareness. I learned how to use different platforms effectively and maintain a professional digital presence. It also improved my understanding of cyber threats and how to prevent them. Each task contributed to enhancing my knowledge and practical abilities. Overall, this project

was a valuable learning experience that will help me in my academic journey and future career.
