Project Report-Building My Digital Portfolio Using Professional Platforms

For this task, I created and updated my profiles on **GitHub**, **LinkedIn**, and **Stack Overflow**. Each of these platforms serves a different purpose in building a strong digital portfolio. GitHub is mainly used for hosting and sharing code, where I created a profile README including my basic academic details and learning goals. LinkedIn is a professional networking platform where I added my education details to connect with professionals and explore career opportunities. Stack Overflow is a community where developers ask and answer technical questions, which helps in improving problem-solving skills.

Over the next four years, I plan to use GitHub to regularly upload my projects and track my progress. I will use LinkedIn to build a professional network, follow industry trends, and apply for internships. On Stack Overflow, I aim to learn from others and gradually start contributing answers. These platforms will help me grow academically and professionally.
